DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4, 6-8, 10 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Sieben et al (US 4,854,076).

Sieben et al discloses a remotely operated hatch for a tank car. The assembly is comprised of a hatch 10 having a sidewall with a locking mechanism, shown in figures 3 and 4, attached thereto for locking a hatch cover 15. The hatch cover, with a tubular seal 16, is attached on a pivoting axis with a flange for the lock to attach to when the cover is in the closed position. Piston 25 is an actuator, connected to both the cover and the lock for systematically operating the cover and the lock. When activated the actuator will move the lock from either a locked or unlocked position and the cover will move from either a closed or opened position. A remote control activator from a remote location of the vehicle operates the actuator.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sieben et al in view of Morch (US 6,053,348).

Sieben et al discloses a remote control hatch cover for a tank car as described above. However, Sieben et al does not disclose an inflatable seal around the bottom of the hatch. Morch discloses a hatch for a tank car with an inflatable seal. It would have been obvious to one of ordinary skill in the art to have applied an inflatable seal, like that of Morch, to a remote hatch assembly, like that of Sieben et al, in order to produce a more secure seal around the hatch in order to protect both the product in the tank and the workers around the tank car.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bounds (US Re. 36,685) and Early (US 6,352,036) both disclose remote controlled hatches for various types of vehicles.
